Restoration Staging

When St John's Episcopal Church in Jamaica Plain, MA needed significant restoration to the building facade, Cenaxo was contracted to undertake the project.

Built in 1882, portions of the church's slate roof, copper flashing, and gutters required replacement. Severely deteriorated masonry needed rebuilding and deep repointing with Natural Cement. Damaged stones were replaced with new carved stone.

Cenaxo's highly skilled craftspeople preformed the delicate restoration to the church façade and by self-performing all the scopes of work, Cenaxo completed the project on time and on budget.
